

CLINICAL PRACTICE GUIDELINE
FOR THE REHABILITATION OF ADULTS
WITH MODERATE TO SEVERE TBI

TBI INPATIENT REHABILITATION
LENGTH OF STAY (LOS) – REFERENCE TABLE

QUEBEC DATA

2013-2014		2014-2015		2015-2016	
N	Average LOS (days)	N	Average LOS (days)	N	Average LOS (days)
415	56,2	408	50,5	447	49,1

Source: Annual provincial AS-484 statistical reports – Quebec rehabilitation facilities. For two (2) facilities, the data of certain years had to be obtained directly from the program as they were not available from the AS-484 reports.

Legend:

N: Total number of adults admitted in a traumatic brain injury (TBI) inpatient rehabilitation unit in one of the rehabilitation facilities in the province of Quebec. There are eight (8) rehabilitation facilities providing inpatient services to adult TBI patients in the province of Quebec.

Average LOS: The average length of stay (LOS) represents the average number of days people remain admitted in a TBI inpatient rehabilitation unit in the province of Quebec.

Note: The data obtained from the AS-484 does not provide the level of severity of the TBI sustained by the individuals admitted for rehabilitation. Although some cases of mild TBI could be included in the represented data, it is believed that the vast majority of admitted cases concern moderate or severe TBI.
